

Systems, Software, & App Design Internship

This internship position *may* be eligible for credit through your university; please contact us for more information.

Honeybee Financial is a startup in small business and real estate investment lending. We believe in challenging the status quo. Small business owners and real estate investors should focus on the work they do, not loan applications and rate shopping. We're highly skilled at underwriting and placing loans, and we're seeking a passionate and motivated intern to join our team. Our mission is to be a resource to our clients so they can do more of what they do.

We offer competitive alternatives to traditional business lending. We are unique -- a direct lender, approving and funding many loan programs directly -- while we also leverage our robust network of partnerships with other lenders. This allows us to offer a suite of complimentary loan products allowing for unmatched creativity, efficiency, and flexibility for complex situations.

This internship position is perfect a recent graduate or current student in computer science, data science, or related technological field with an interest in systems design, software design, application design, and related creative-technical work. This position will work with our Founder and Managing Director, Hunter Foote, to develop systems to assist in loan application processing, underwriting, data collection, analytics, and other functions. Specific projects include the development of a secure online application and document collection portal, data collection and analytics for real estate and small business loans, and database creation for borrowers and lenders in our network. Successful applicants will be hard-working, creative, and interested in working in the dynamic environment of a startup company. We do not require applicants to be majors in computer science or a related field; our requirement is simply an *interest* in and ability in programming and strategic technological thinking.

A portion of the work will be with Vanderburgh House (www.VanderburghHouse.com), an organization dedicated to helping folks struggling with addiction to drugs and alcohol. Honeybee Financial has a joint venture with Vanderburgh House to provide advisory and loan placement services for their growing network of facilities. We will be working with Vanderburgh House to design a web-based directory of recovery services, with a focus on live-time occupancy status of recovery hospitals and detoxification centers.

RESPONSIBILITIES

- Broad application of computer science and technology to a diverse set of problems
- Work with Loan Specialists to design effective methods of collecting data from applicants
- Work with Loan Underwriters to create better systems for loan due-diligence and underwriting
- Assist our product design team with development of software and applications
- Work with Marketing & Communications to integrate content collection systems with web platform

KNOWLEDGE/SKILLS/EXPERIENCE REQUIREMENTS

- Knack for technological creativity and teamwork
- Familiarity with broad computer science and technological fields
- Strong verbal and written communication skills
- Desire for a *demanding* work environment with strong growth potential
